Node Practice

----

1) Create a responsive Add Item form with the below mentioned field
  - Item name
  - Item Category (drop down list with three categories named as, Category A, Category B, Category C)
  - Item Price
  - Item Image 1
  - Item Image 2
  - Item description

2) Submit this form value to mongoDb(database name: ItemDetails, collection name: Items) using Express, Node

3) Generate an error message if the form is not correctly submitted and show that using flash.

4) Prepare a Registration form for user's email and password, verify email. After verification redirect to login form which contains same fields of registration. After successful login redirect to show item page.

5) Add at least 5 items, show the name and images by tables. Each row will have an edit button to edit. And details button to see details (in card)

6) Create a logout button also.
